### LAWS, REGULATIONS, NORMS, AND STANDARDS

The composition of Advanced Crystal and forward-integrated products in the Advanced Crystal standard is compliant with regulatory industry norms and laws regarding the restriction or prohibition of certain substances for finished products in the most relevant segments of our customers' business, including:

#### General

Lead in surface coatings as set out in 16 CFR 1303.

#### Textile Products

Crystals from Swarovski, with only very few exceptions are certified to Oeko-Tex Standard 100 Class II (products in contact with skin), an international quality label for harmless textiles.

For detailed information as to which crystals from Swarovski comply with Oeko-Tex Standard 100, please visit [SWAROVSKI.COM/PROFESSIONAL](http://SWAROVSKI.COM/PROFESSIONAL)

This is valid for current regulations (as of March 2014), but it must be considered that laws and regulations may change in the future and vary from country to country. Therefore we cannot guarantee to fulfill all regulations. For updated information please visit our Business website. The final responsibility regarding compliance for third-party finished products lies with the manufacturers of the finished product.

### CARE INSTRUCTIONS

Not following Swarovski care instructions can damage the product and thus lead to damage of textiles or other damage.

Please note that with all standard washing processes (whether carried out by a household washing machine or via dry cleaning) the rotation of the drum places significant mechanical forces on the textiles. The most important factor in ensuring a secure wash is correctly applying the product, without compromising its adhesion. The larger the product employed, and the more products are applied next to each other, the greater the risk of damage. Swarovski products are made out of crystal or contain crystal and must thus be handled with suitable care.

In general, it is recommended that a soft wash bag is used and that the washer drum is filled to protect against damage.

To maintain the quality of crystals from Swarovski, the following is also important: before washing, turn items of clothing inside out, select a gentle wash cycle, and use a mild detergent.

According to DIN EN ISO 3758, our care instructions list all product groups, meaning each product used by customers must be assessed separately with regard to its washability and suitability for its purpose/the end product. The recommendations given by Swarovski reflect our current level of knowledge. Swarovski uses these recommendations to decide on the suitability of the product for textile applications. Customers are solely responsible for defining the recommended cleaning process for the end product, and must consider the care advice of Swarovski and any other manufacturers in doing so. The type of shape, cut, surface effect, and size, as well as the weight of the application and the quantity of crystals used has a significant impact on the cleaning process to be followed. To avoid all risks, customers/textile cleaning companies should remove any large crystal stones, buttons, etc., that have been stitched on before cleaning, and stitch them back on again afterwards.
